

Roadmap - Topic 8 Climate

Learning Objectives	Vocabulary	Questions
Lesson 1: Climate Factors		
- identify weather as a description of short-term atmospheric conditions - recognize climate as long-term patterns in atmospheric conditions - how latitude, altitude, distance from large bodies of water, and ocean currents affect patterns of circulation in the atmosphere and ocean	Climate Polar Tropical Temperate	Arid Monsoon 1. How do the 'tudes (latitude, longitude, altitude) affect climate? 2. What ocean current impacts California's climate and how? 3. How do mountains impact precipitation? 4. What causes a monsoon season?
Lesson 2: Climate Change		
- patterns of change in global temperatures - the effect of greenhouse gases on global temperatures - how both natural processes and human activities affect global temperatures	Greenhouse Gas Greenhouse Effect Climate Change	Global Warming Fossil Fuel 1. What are natural processes that cause shifts in climate? 2. What evidence is there currently for climate change? 3. Which human activities contribute to climate change and how?
Lesson 3: Effects of a Changing Climate		
- how changes in global temperatures impact sea levels - sea levels are rising - global temperatures and organisms' adaptations are connected - human actions impact climate change	Adaptations	 1. How would rising sea levels affect the Bay Area? 2. How are polar ecosystems at risk with increasing global temperatures? 3. What is the effect of climate change on the frequency of severe weather events? 4. What can the government do???
